Wednesday Challenge Form

Group Members: Jonathan, Malik, Rohin & Me

Problem Statement: Make a machine that is
Able to tell the difference between a cat and a
Dog and have it be able to tell you which one it is

Approach: We thought of different things like
Putting it in water, which way it drinks etc.
The thing we decided to do was put a squirrel
On top of a pole and see which animal would
Be able to get it. Since a cat would be able to
Climb up the pole it would be the cat and if it
Wasn't able to get up the pole it would have
Been a dog

Solution: What we said to do is put a squirrel on
A pole and see what animal could get it

Lessons Learned: You have to make something
That is able to be able to recognize the difference
Between the two
